

PRESS RELEASE

Biosenta announces today the passing of Marcus Martin, the founder and a director of the company, on June 14, 2017, caused by the sudden heart attack.

Mr. Martin was the inventor of the new and environmentally safe disinfectants known as ZeroMold, True and Purity. These disinfectants are environmentally safe and highly effective to kill various bacteria and viruses including MRSA and HIV, among dozens of others.

Mr. Martin was the first scientist to invent a process to encapsulate calcium hydroxide, known as the Tri-Filler particle. Tri-Filler can be used in a vast range of materials, from paint to resin products, to provide anti-microbial protection. Tri-Filler replaces currently used chemicals many of which are carcinogenic.

His scientific knowledge and skills were unmatched in these fields.

In addition, Mr. Martin was a tireless advocate of Biosenta and worked to bring these products to market for the benefits of shareholders and society.

The board of Biosenta and employees are very saddened by Mr. Martin's passing and wishes to express its condolences to his family and friends.

Mr. Martin is a true scholar and gentleman, and will be missed very much.
